

Desktop GP

Enabling quick and secure video consultations from within the clinical system

MJog Video

MJog Video is the newest addition to MJog Desktop GP, allowing for GPs to access it conveniently from the desktop of their clinical system, whilst accessing any patient record.

Video consultations are becoming increasingly important for GPs as it allows for flexibility for the GP and the patient.

Dr Amir Hannan describes MJog Video as “a game changer as now I can make video calls as easily as sending a quick SMS message.”

MJog Video is installed within five minutes and requires no apps or registration for the patient at all, allowing for a seamless experience for them. This is important to the patient as engagement with the practice will decrease if there are any hurdles to overcome.

Dr Hannan adds, “Patients find it easy to use and saves them a journey too whilst being able to see their doctor or nurse.”

GPs can use their PC and webcam to conduct the consultation or their mobile phone, thus aiding in remote-working. MJog Video also allows for almost any video solution to be plugged in, so practices have the flexibility to use either MJog’s own built-in video service, or one

that is already used within the practice or already funded.

Whilst other solutions offer just one option for video, MJog Video gives practices the freedom to plugin whichever solution they wish – whether that’s MJog Video’s built in solution, or options like Zoho or Zoom.

With Video, GPs can use either their PC and webcam to conduct the video consultation or their mobile device. This flexibility helps with remote working too, as it’s unlikely GPs will have AV equipment at home.

GPs can apply SNOMED codes upon sending and upon completion. Additionally, MJog detects whether the mobile number is shared which improves patient safety.

MJog continues to innovate in the healthcare market and Dr Hannan confirms, “The face of general practice is changing and this fits in with how we all want to work”.

What’s the cost?

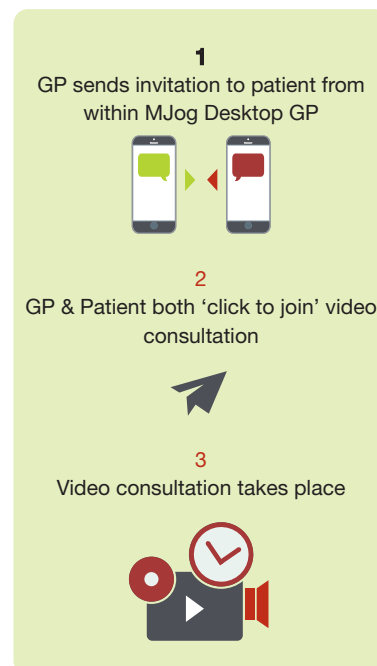

MJog Video is £120 per year plus VAT with each video consultation using MJog’s own service accruing a small fee on top of that. Some practices are eligible for MJog Video for free, so please get in touch.

Sending the video invitation via SMS costs just one segment and for users

of MJog Smart, sending video invites via MJog Messenger is free.

For Patients

The process for patients is incredibly smooth, with no apps or registration required when using MJog Video’s built-in solution. After receiving their video consultation invitation, patients simply click the link in their SMS message or within MJog Messenger and load up the video consultation within their web browser on their mobile device.

MJog Video’s Key Features:

- One Click Install
- No app or registration for the patient
- Safe and secure video calling from any device
- SNOMED code on consultation, invitation and completion
- Plug-in other video solutions such as Zoho, Zoom, Skype, and many more
